

ALEKSANDR VORONTSOV

vorontsov.co.uk • aleksandr@vorontsov.co.uk • github.com/a-vorontsov

Full-stack/platform engineer with experience building internal engineering platforms, CI observability systems, developer tooling, and production-facing web applications across React, TypeScript, Python, Go, Node.js, AWS, and CI/CD. Strong focus on system design, test strategy, developer experience, and reducing operational friction across engineering teams.

SKILLS

Stack: React, TypeScript, Python, Go, Node.js, Java · PostgreSQL, Redis, NoSQL · AWS (S3, CloudFront), Docker, Terraform · Playwright, Cypress

WORK EXPERIENCE

Artificial Jan 2024 - Present
Full-Stack Engineer London, UK

- Sole engineer on a greenfield CI observability platform — designed the architecture end-to-end, ingesting test runs via webhooks, storing artefacts in S3, and surfacing presigned HTML reports for real-time health monitoring across the engineering org.
- Built an internal GitOps dashboard, consolidating authentication, deployment visibility, CI status, and system health into a single interface now used daily by 6 engineers across delivery workflows.

PolyAI Aug 2022 - Aug 2023
Full-Stack Software Engineer - Platform London, UK

- Designed and delivered the user administration stack end-to-end - covering user group management, API key provisioning, and an automated user generation framework for integration testing, reducing manual QA overhead across the platform team.
- Shipped a node duplication system in the core graphing interface, cutting the time required to transfer nodes between projects by 95%.

Visa Jun 2021 - Aug 2022
Graduate Software Engineer London, UK

- Built an internal code generation tool that parsed complex interface and message specifications automatically, cutting implementation time from 7 days to under 5 seconds - eliminating a significant manual bottleneck in the Open Visa Net development workflow.

Perfocal Oct 2017 - May 2019
Full-Stack Developer London, UK

- Sole developer across the full platform and infrastructure - built booking systems, static page generation tooling, and an automated email/SMS notification system, growing user impressions by 200% and engagement by 78% within two months.

NOTABLE PROJECTS

CharGen - <https://char-gen.com/>

- Built and maintained, with a collaborator, a production AI tooling platform for RPG players and Dungeon Masters, supporting 43,000+ users and 830,000+ generated images.
- Implemented authentication, payments, persistent world-building data, image generation workflows, and session transcription/summarisation features.
- Integrated AI image generation, Discord bot recording, audio upload/transcription, and subscription-based monetisation into a freemium SaaS product.

EDUCATION

King's College London September 2018 - June 2021
BSc Computer Science, First Class Honours London, UK

- 84% in final year dissertation discussing the implementation of a compiled programming language named Aver. Source code available at <https://github.com/a-vorontsov/aver>.
- 95% in Software Engineering group project working on a React Native application with a client.
