WORK EXPERIENCE

Artificial

Jan 2024 - Present
London, UK

Full-Stack Engineer

- Led the architecture of an end-to-end test observability pipeline across three repositories, incorporating product test runs into the dashboard through webhooks, s3 artefact storage, embedded HTML reports, and presigned URL access to provide real-time CI health monitoring for the team.
- Developed an internal GitOps operations dashboard with features like authentication, deployment views, and dashboards for CI and system health.
- Created comprehensive Playwright test automation for regression flows, spearheaded a team-wide transition from Cypress to Playwright ensuring reliable CI performance at scale.

PolyAI

Aug 2022 - Aug 2023
London, UK

Full-Stack Software Engineer - Platform

- Implemented node duplication feature in a graphing interface, enabling seamless copy-pasting and 95% reduction of time for users to transfer nodes between projects.
- Drove design and implemented end-to-end user interaction stack, including user group administration, API key management, and robust test infrastructure with user generation.

Visa

Jun 2021 - Aug 2022
London, UK

Graduate Software Engineer

- Developed internal tool to enhance development processes. The tool aimed to increase architecture and analysis by removing manual analysis of complex interfaces and message specifications, decreasing implementation time from 7 days to less than 5 seconds.
- Automated the process allowing for seamless transition from spec to entry point of the Open Visa Net application to define messages for processing.

Perfocal

Oct 2017 - May 2019
London, UK

Full-Stack Developer

- Individually managed full development lifecycle across entire platform and infrastructure.
- Set up custom static page templating solution for use in generating static landing pages with more efficiency, increasing user impressions by roughly 200% within 2 months.
- Developed booking infrastructure and platform used for pop-up photography sessions.
- Implemented an automated email and SMS digest system), improving customer-photographer communication and increasing website engagement rate by 78%.

NOTABLE PROJECTS

CharGen - <https://char-gen.com>

AI toolkit for tabletop RPG players and Dungeon Masters. Combining an AI art generation studio - covering characters, NPCs, monsters, landscapes, battlemaps, items, spells, and 3D printable miniatures - with a suite of 16 text generators for world-building (names, taverns, settlements, dungeons, factions, and more). A session recording and summarisation feature transcribes and recaps gameplay sessions via Discord bot integration or audio upload. Generated entities are stored in a persistent World Codex, allowing campaigns to be built and linked across sessions. The platform has grown to over 43,000 users with more than 830,000 images generated, and operates on a freemium subscription model.

EDUCATION

King's College London

September 2018 - June 2021
London, UK

BSc Computer Science, First Class Honours

- 84% in final year dissertation discussing the implementation of a compiled programming language named Aver. Source code available at <https://github.com/a-vorontsov/aver>.
- 95% in Software Engineering group project working on a **React Native** application with a client.

SKILLS & INTERESTS

Languages & Frameworks - JavaScript, TypeScript, Node.js, React, Java, Go, OCaml, Python, SQL, PostgreSQL, NoSQL, Redis

Software & Tools - Git, Unix/Linux, Docker, AWS (S3, CloudFront), Terraform, Webpack, NPM, Jenkins, CI/CD Pipelines
